DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8 are drawn to a light source, classified in class 356, subclass 121.
 - II. Claims 9-19 are drawn to a detection apparatus for detecting defects, classified in class 356, subclass 237.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the defect detector of Group II can use magnetic resonance imaging for detecting defects of a planographic printing plate. The subcombination has separate utility such as illuminating a photosensitive surface of a lithographic plate.
3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
